

FluNOX

HARNESSING THE POWER OF SCIENCE AND NATURE

“Coming to a person near you—ready or not—the Bird Flu”

Why play chicken with your family’s health? Exciting new personal nutritional product offers life saving health benefits

The Flunox formulation is a biotechnology breakthrough in assisting the development of an impenetrable immune function to defend against life threatening infections caused by pathogens.

The unique oral spray allows the powerful Bio Actives in the solution to be immediately absorbed through the mucus membranes in the mouth and oesophagus into the blood stream. The secret is the concentration of Proline Rich Polypeptides which act on the immune system similar to a software program, putting all defenses on red alert. They install the latest battle plan and strategy to defeat the establishment of even the most dangerous pathogens.

The strategy is to create a body fortress against the frightening, mutating bacteria and virus that pose a risk to our health.

Our first line of defense against the dangerous infections of Bird Flu, Sars, Legionnaires disease, food poisoning, diarrhea etc is our immune function.

Anything we can do now to support and strengthen our immunity is a wise investment.

These pathogens must be destroyed immediately they enter the body before they establish colonies and multiply to billions in only a few hours overwhelming the bodies defence systems.

New Image has extracted the potent and powerful bioactives from nature’s greatest health supplement Colostrum delivering reinforcements directly to the battlefield.

Throughout history there have been devastating plagues but not all infected victims died.

Those that survived had a strong immune function.

The USA Today newspaper warned recently “the only defense against the bird flu was a strong immune function.” Interesting that powerful natural forces do not change as civilizations change. Therefore we must change.

Rapid response time in the advent of a pandemic is paramount for survival.

Our immune function is in a constant state of war against terrorist pathogens and has an amazing arsenal of high tech weapons superior to any military campaign in warfare.

The Flu Nox taken regularly literally adds many extra divisions of infantry and weapons to the body’s natural defense system fortifying against invasion.

Flu Nox Bioactives in the formula strengthen the state of readiness of your own immune function and adds immense firepower and reinforcements. It is your best insurance against infections and should be taken daily so your body is always in a state of preparedness.

Just look at this arsenal. All invaders should be quickly defeated.

Proline Rich Polypeptides. PRP’s

Military Training academy and Intelligence Service

Special forces of information carrying peptides. Modulate immunity and cytokine levels.

Inhibit viral infection in cells. Restore normal cell function. Anti viral, anti allergy, anti inflammatory.

Cytokines influenced by PRP’s (Note Cytokines are a unique family of growth factors and are chemical messengers that communicate and orchestrate the attack forces.

Interleukin Type 1 Repairs after Neuro degeneration following Strokes Alzheimer’s and multiple sclerosis etc.

Type 4 normalizes asthma allergic responses.

Type 6 Involved in IgA production.

Type 10 Reduces inflammation.

Type 13 Reduces chronic allergic inflammation.

Interferon Gamma regulates the immune system

New Image

Interleukins regulate the duration and intensity of the immune response (Attack) plus play a role in cell to cell communication. Boost T-Cell activity and production of immunoglobulins

Lactoferrin regulates and absorbs iron which is an essential substance for bacteria and virus's to reproduce and replicate.

Transferin binds and transports iron

Lysozyme is an immune system booster that destroys pathogens on contact.

Transfer Factor

Logistics, transportation and communications

Very small molecules that transport knowledge and finger prints of terrorists so they are readily identified. Also are troop carriers to deliver inventory to the front lines of the battle.

Natural Killer T-Cells

Warriors and Infantry

Large Lymphocytes are scavengers that scour the body looking for anything out of place and engulf or chew up infected cells or invaders.

Ten to fifteen percent of the white corpuscles in the blood are Lymphocytes. They are the front line of defense and locate and kill diseased cells and invaders.

The average NK T-cell can destroy between 20 to 50 pathogens or diseased. This ratio is known as a lytic unit which measures its killing power. A recent clinical trial in the USA with 109 patients given PRP supplementation showed an increase of Lytic units from 18 to 246. An increase in killing power of 1267%.

PRP's play a vital role in coordinating all the bodies' forces to destroy pathogens immediately they enter the body and before they establish a bridge head. This is particularly important with the virulent bird flu virus.

Immunoglobulins

Attack divisions

IgA Neutralizes toxins and harmful pathogenic invaders.

IgA Inhibits binding of pathogens to cell surfaces.

IgM Controls and regulates antibody response.

IgD Supports healthy cell function.

IgE Regulates allergic response.

Growth Factors

Rejuvenation, Red Cross and Hospitals

Growth hormone is made by the pituitary gland and controls body growth and replication of all cells.

IgF1. Has a similar molecular structure to insulin. Also delivers an anabolic effect.

IgF2 manages the functions of major organs. Brain, liver, kidneys etc.

TgFa Induces epithelial development.

Epidermal GF Regulates cell growth and proliferation.

Fibroblast GF assists in muscle building and repair.

Platelet derived GF regulates cell growth and division.

Secretory IgA protects mucous membranes. Throat, lungs and intestines.

IgA specific helper stimulates natural IgA production.

Other immune support activities

Military High Command

Leukocytes stimulate production of interferon.

Interferon slows viral reproduction and penetration through cell walls. (Used a lot in cancer treatment) Regulates intensity and duration of immune response. Responsible for cell to cell communication. Boost T-Cell activity and production of immunoglobulins.

The body's immune function is an amazing and complex defense. As in conventional warfare battle strategies can be sabotaged and pathogens or poor nutrition can weaken the immune function or cause it to attack the body as in autoimmune disorders.

Flunox is a scientifically advanced formula to modulate and maximize every complex activity associated with immunity.

It is an essential item for a preventative strategy against today's dangerous mutating pathogens. A bottle of Flunox should be 'on guard' in every home.
